STUDENT NAME: AMANDEEP	MODULE: My Practice	PRACTICE SET 003
BATCH: ABES_JAS26_FSD JAVA_IIIYear_Batch 02	DOMAIN: Gen AI & Prompt Engineering	STATUS: In Progress

Practice Set 3 – Bias Mitigation and Ethical Framing

Master bias detection, gender neutrality in talent acquisition, generational inclusivity, balanced multi-perspective policy analysis, and adversarial red-teaming of AI responses.

KEY LEARNING OBJECTIVES:

- Neutralize gender-coded language and stereotypes in professional role descriptions.
- Eliminate generational and age-based deficit framing in corporate upskilling programs.
- Engineer epistemically balanced, multi-perspective prompts on sensitive and ethical topics.
- Audit and red-team biased AI outputs using structured fairness and ethical frameworks.

STEP-BY-STEP WORKSHEET INSTRUCTIONS:

Step 1: Scan the prompt context for latent cognitive biases, cultural assumptions, and demographic stereotyping.
Step 2: Establish ethical guardrails and epistemic neutrality (requiring equal depth for competing viewpoints).
Step 3: Implement explicit fairness constraints and mandate evidence-based, counter-stereotypical exemplars.
Step 4: Write your debiased prompt and review using the ethical alignment checklist.

EXERCISE 3.1: NEUTRALIZING GENDER-CODED LANGUAGE IN TECHNICAL HIRING

Problem Statement: A recruitment team drafted an aggressive, masculine-coded job description for a Lead DevOps Architect ('Looking for a rockstar coding ninja who will aggressively dominate release cycles and work around the clock'). Design a prompt that rewrites this into an inclusive, competence-based job listing that appeals equally across gender demographics, defining clear technical competencies, collaborative communication metrics, and psychological safety.

Baseline / Reference Prompt:

```
"Write a job description for a tough, aggressive principal architect who will dominate engineering discussions."
```

STUDENT RESPONSE WORKSPACE:

[1] Role & Persona: _____

[2] Task & Directives: _____

[3] Constraints & Format: _____

[4] Complete Engineered Prompt:

EXERCISE 3.2: ELIMINATING AGE-BASED STEREOTYPES IN ENGINEERING UPSKILLING

Problem Statement: An enterprise is migrating legacy monoliths to cloud-native microservices and AI agents. A drafted prompt exhibits condescending age-based assumptions about senior developers ('teach older legacy programmers who struggle to adapt to fast modern tech'). Re-engineer the prompt to frame the program around honoring architectural wisdom while mastering modern cloud primitives, completely removing deficit framing.

Baseline / Reference Prompt:
"Create a basic AI training plan for older legacy developers who struggle with new tech."

STUDENT RESPONSE WORKSPACE:
[1] Role & Persona: _____
[2] Task & Directives: _____
[3] Constraints & Format: _____
[4] Complete Engineered Prompt:

EXERCISE 3.3: EPISTEMICALLY BALANCED MULTI-PERSPECTIVE POLICY ANALYSIS

Problem Statement: Formulate a prompt instructing the AI to analyze the contentious deployment of Autonomous AI Agents in financial high-frequency trading (HFT) and consumer loan approvals. The prompt must enforce strict epistemic neutrality, mandating equal paragraph allocations, cited regulatory frameworks (e.g., EU AI Act, Dodd-Frank), both algorithmic efficiency benefits and systemic contagion risks, without taking an advocacy stance.

Baseline / Reference Prompt:
"Is using autonomous AI in banking and trading dangerous or good? Tell me what to think."

STUDENT RESPONSE WORKSPACE:
[1] Role & Persona: _____
[2] Task & Directives: _____
[3] Constraints & Format: _____
[4] Complete Engineered Prompt:

EXERCISE 3.4: ADVERSARIAL RED-TEAMING & NEUTRALIZING BIASED AI OUTPUTS

Problem Statement: You are given an AI-generated loan approval justification that flagged applicants from rural zip codes as 'inherently higher operational risk'. Craft an adversarial audit prompt that: (1) Deconstructs the statistical proxy bias in the reasoning, (2) Cites disparate impact doctrines, and (3) Re-engineers the assessment prompt to enforce zip-code blind, individualized merit evaluation.

Baseline / Reference Prompt:

"Analyze why this loan decision response might be unfair to rural borrowers and rewrite it nicely."

STUDENT RESPONSE WORKSPACE:

[1] Role & Persona: _____

[2] Task & Directives: _____

[3] Constraints & Format: _____

[4] Complete Engineered Prompt:

SELF-REVIEW CHECKLIST:

- [ ] **Gender & Cultural Neutrality:** Free from gender-coded adjectives and cultural assumptions.
- [ ] **Non-Deficit Framing:** Experience, age, and background framed around strengths, not deficits.
- [ ] **Epistemic Balance:** Counter-arguments and opposing stakeholder perspectives given equal depth.
- [ ] **Evidence-Based Standards:** Requires objective standards, regulatory benchmarks, and audit criteria.
- [ ] **Ethical Guardrails:** Explicit negative constraints preventing harmful stereotyping or bias.

CRITICAL REFLECTION & LEARNING SYNTHESIS:

- *How do subtle lexical choices (e.g., 'aggressive' vs 'decisive', 'legacy developer' vs 'senior engineer') shape AI output tone?*
- *Why is epistemic neutrality more valuable in policy and technical evaluation than allowing the model to pick a 'winning' side?*

Reflection Notes:

_____

_____

COMPLETION STATUS:

[ ] COMPLETED (Meets All Rubric Criteria)

[ ] NEEDS REVISION (Resubmit Refined Prompts)

Evaluator Signature: _____

EVALUATOR & MENTOR REMARKS:

Feedback Notes:

_____

Rubric Evaluation: [ ] Clarity [ ] Constraints [ ] Edge Handling
